CONTACT: cmluis@fc.ul.pt

Research is underway within this project to uncover the history of citizen science in Portugal in the area of biodiversity monitoring, by revealing how the amateur naturalists' communities were formed and evolved across the 19th and 20th centuries, and understanding when and how society was called to volunteer in biodiversity monitoring practices. This information is of utmost importance to compare with citizen science and biodiversity monitoring practices by non-experts, which are undertaken nowadays.

Se os caçadores tomarem nota de qualquer falta ou inexactidão que encontrem no presente trabalho, em vista das observações que forem fazendo e aproveitarem para as suas col. ou mandarem para os museus as esp. novas ou r. que encontrarem, a caça tornar-se-ha para elles mais attrahente e prestarão grande auxilio aos futuros ornithologistas.
